July 2009

Dear Colleague:

This September marks the 10th anniversary of the founding of Condor Consulting, Inc. To commemorate this anniversary we have prepared a digital resource containing:

1) The full proceedings of Exploration 07
2) A variety of geoscience materials relating to Condor’s main business focus, airborne EM
3) Section dealing with 3D Inversion and Display.
4) A selection of historical references available digitally for the first time

Within the Condor folder, there are a number of Condor’s major case studies covering a variety of deposit/mineral styles as well as a series of papers presented from 2003-2009 documenting the evolution of the VTEM EM system.

In the last four years Condor has begun to develop capabilities for the advanced processing and display of a variety of geoscience data sets into what is sometimes referred to a Common Earth Model. These materials can be found in the subfolder “3D Display and Data Integration”. Included within this folder is a section on inversion which provides some of the key papers on this exciting topic, including key materials on the work of Nick Williams undertaken as part of his PhD at UBC over the period 2004-2008.

A complete copy of the CIMM Commonwealth Conference held in 1957 which provides a fascinating collection of papers on mining geophysics, marking in effect, the achievements of first decade of modern mining geophysics.

Finally, a folder entitled Decennial Proceedings which contains the proceedings from the four previous Decennial meetings starting in 1967.

Ken Witherly
President
Condor Consulting, Inc.
